 - azul Zulu JDK: 11.41.23
 - Wildfly: 26.1.2FINAL
 - Elasticsearch: 5.6.16
 - Databases
 - Oracle 19.3
 - postgresSQL 13.3
 - Client (Windows10)
 - Google Chrome: 107
 - Mozilla Firefox: 107
 - Edge (Chrome-based): 107

3. Installation/Update

For detailed information on performing an installation or update, please refer to the description in the Installation Guide.

4. Patches

Since *pirobase PIM* patches are treated like normal releases, the steps described in the operating manual must also be carried out for them.

5. Improvements and new features

PIM-24177

TLS upgraded to version 1.3.

PIM-24544

Improve message for missing scope settings in CLI export using search.

PIM-24545

Require scope settings in export with filter only if scope-dependent attributes are used.

PIM-24555

Behaviour for CLI-export if searchDefaultScopes=True but "dashboard.effective-scope" for the user is empty.

PIM-24556

System-owner should not out of the box be a buyer and a supplier without having the boxes checked.

PIM-24613

Introduce install parameter "ImportExportConfigPack" for im-/export config items.

PIM-24617

Remove unnesseary SQLShell files.

6. Bug fixes

PIM-24210

Hidden item-publications widget is displayed at the bottom of the screen after saving.

PIM-24265

Effective-properties does not work for catalog/category descriptions.

PIM-24307

Mass edit function is always considering item category links for the preview report.

PIM-24331

Users with several item.view privileges do not see all matching items.

PIM-24525

A user can see and administrate more than it should in the catalog management.

PIM-24537

Adhoc workflow cannot be started for groups (for non-admins).

PIM-24548

Scope-dependent Composites not working with "language", "market" and "customer" aspects of the item.view-right.

PIM-24550

Searching for composite attributes with the "internal navigation" leads to empty attributes.

PIM-24558

searchScopeCombination setting is not used correctly

PIM-24574

"searchScopeCombination" must be specified without spaces.

PIM-24612

A Date attribute including a time indication does not let the user set the clock.

PIM-24614

BeanCurrentlyInCreation-exceptions during 22.2.0 installation.

PIM-24621

Too long values for Date/DateTime attributes are stored as seemingly arbitrary future values.

PIM-24635

Remove item.view-"contain" for categoryItem.link.

PIM-24636

Remove item.view-"contain" for categoryItem.link

PIM-24642

The flags of the system owner are not editable anymore.

PIM-24648

deleteStructureData.groovy: wrong type for BPNs, missing exception handling.

PIM-24649

NPE Exception Filter-Management.

PIM-24652

Export using search in scope-dependent attribute does not always work.

PIM-24653

The "Elasticsearch-Index-Service" disappears.

PIM-24662

Multi-edit: Impossible to apply relations.

PIM-24665

Multi-edit: Impossible to store relations.

PIM-24699

Misleading validation messages when trying to modify owner 0.

PIM-24721

Date opt for language dependent attributes does not behave correctly.

PIM-24723

Class StructureObjectRef method "itemType" use SystemKey and not SystemKeyCaseSensitive.

PIM-24732

Date opt for language dependent attributes is not displayed correctly.

PIM-24734

Systemname can be changed, although category is unlocked.

PIM-24742

Performance tests are significantly slower.

PIM-24748

Privilege combinations with `item.view` and `item.modify` do not work correctly.

PIM-24749

Parameters in `item.modify` privileges are not combined correctly (so users see too many items).

PIM-24752

Adding an outgoing relation in the preview-editor leads to an error message.
